Assignment 01

1. Team structure:

1. **Top management:** Senior leadership take the major business and strategy decisions.
2. **Business:** Teams are often divided by industries such as banking, healthcare, retail, manufacturing, telecom, energy and government.
3. **Service & technology units:** These can include cloud, application development, data, cybersecurity, engineering, consulting, infrastructure, testing and business process services.
4. **Project & delivery teams:** Project managers, technical leads, developers, testers, business analysts, designers, DevOps engineers and other specialists work together on the actual project.
5. **Support functions:** HR, finance, recruitment, legal, sales, learning and development, procurement and internal IT support the main business.
6. **Delivery centres:** A lot of work is distributed across different cities and countries. This makes 24/7 delivery possible for global clients.

Example:

Infosys describes go-to-market business units by industries such as Financial Services and Insurance, Communications, Energy/Utilities, Manufacturing, Hi-Tech and Life Sciences/Healthcare.

Wipro describes strategic market units and global business lines. HCLTech publicly separates its businesses into IT and Business Services, Engineering and R&D Services, HCLSoftware, and AI/GenAI.

2. List of 15 top companies in india:

1. **Tata Consultancy Services (TCS) :** One of India's largest IT services companies. Its services include application development and maintenance, consulting, service integration, digital transformation, AI, data, cloud, business operations and platforms.
2. **Infosys :** Major IT consulting and services company. It works across industries and has both digital and core services, including application management, engineering, infrastructure, cloud, data and business process services.
3. **HCLTech :** Strong in IT and business services, engineering and R&D;, software products and newer AI/GenAI services. Its engineering background is an important part of its identity.
4. **Wipro :** Global IT services company working in technology services, consulting, business process services and engineering. Wipro has reorganised its global business lines around these areas.
5. **Tech Mahindra :** Strong presence in telecom and enterprise technology services, with services covering consulting, engineering, cloud, data, network and digital transformation.
6. **LTIMindtree :** IT services and consulting company formed from LTI and Mindtree. Its public material shows major work in digital engineering, customer success, cloud/infrastructure, quality engineering and industry-specific services.
7. **Mphasis :** IT services company with strong focus on cloud, digital transformation, applications, infrastructure and business transformation, especially for large enterprises.
8. **Persistent Systems :** Technology services and engineering company with strong work in cloud, data, software engineering and enterprise transformation. It has been putting significant focus on AI-led enterprise work.

9. **Coforge :** IT services company known for digital services and industry-focused work, including banking, insurance, travel and other enterprise sectors. It has also been expanding its AI and engineering capabilities.
10. **Hexaware Technologies :** IT services company focused on digital transformation, cloud, data, automation and application services. It works with global clients through delivery teams and technology practices.
11. **Birlasoft :** Enterprise digital and IT services company, with work around cloud, ERP, data, automation and digital transformation, especially for enterprise customers.
12. **Mastek :** Digital engineering and technology services company. It has a strong presence in government, healthcare and enterprise digital transformation projects.
13. **Zensar Technologies :** Digital solutions and IT services company with work in application modernisation, cloud, data, experience, engineering and industry-focused transformation.
14. **Sonata Software :** IT services company working in digital transformation, cloud, data, engineering and platform-based services. It has recently highlighted an AI-first direction.
15. **Cyient :** Technology and engineering services company with a strong engineering focus. Its work includes digital engineering, product engineering, data and technology solutions for industries such as aerospace, communications and manufacturing.

3. Common strengths:

1. **Large talent pool:** The biggest companies can provide many developers, testers, consultants and specialists. This helps when a client needs a large team quickly.
2. **Global delivery:** Many of these firms have offices and delivery centres in different countries, so projects can continue across time zones.
3. **Industry knowledge:** Because they work with many clients, teams often develop specialised knowledge in banking, healthcare, telecom, retail, manufacturing and other industries.
4. **Process and documentation:** Large service companies normally have established project management, security, quality and delivery processes.
5. **Wide technology coverage:** One company can provide cloud, software development, testing, data, cybersecurity, consulting and infrastructure services instead of the client hiring many vendors.

4. Common weaknesses:

1. **Large hierarchy:** Because there are many management levels, decisions can sometimes take longer than in a small company.
2. **Project dependency:** An employee's experience can depend heavily on which client or project they are assigned to. Two people in the same company can have very different work experiences.
3. **Less control for fresh employees:** New employees may have limited choice over technology, project or location at the beginning of their career.
4. **Routine work risk:** Service projects can sometimes involve maintenance, support, testing or repetitive work. This may not give every employee the same level of development exposure.
5. **Client dependency:** Revenue and work are linked to client budgets and global economic conditions. If clients reduce technology spending, hiring and project demand can be affected.
